BCS Global successfully renews ISO 27001 Certification for another 3 years.

London, UK – 13th January 2015 – BCS Global Networks Limited, a leading worldwide provider of managed videoconferencing, telepresence, and visual collaboration services, today announced that it has successfully renewed ISO/IEC 27001 certification for another 3 years, which is one of the highest internationally accepted standards for information security management. After completing a review, BCS Global's information security management system (ISMS) continues to meet requirements for the International Organization for Standardization certification for another 3 years.

"To achieve the renewal with no major or minor non-conformances is a credit to all involved. Conforming to standards is only achievable if the whole company is part of it at every level," said **Clive Sawkins, CEO of BCS Global**.

In the interest of keeping information assets secure this globally recognised certification, ISO 27001, states that BCS Global have implemented defined security policies, conducted risk assessments and managed identified risks, selected and implemented control objectives.

The certification was granted by **Lloyds Register of Quality Assurance (LRQA)**, a world leader in compliance and standards assurance; after their exhaustive review of BCS Global's Information Security Management System (ISMS) framework, documentation and processes. In 2012 BCS Global actively pursued, and attained accreditation of the ISO 27001 certification as it provides a high level of assurance to our customers and suppliers that their information assets, when processed by BCS Global are being treated in accordance with excellent business standards.

This certification is a key indicator that demonstrates BCS Global's world-class standards to protect vital customer data from a wide range of cyber threats and vulnerabilities that can lead to data loss. It provides third-party verification that the company's ISMS conforms to the international standard for information security that helps protect the integrity of customers' information assets. It also verifies that the ISO/IEC 27001 is now an integral component of all business processes within BCS Global's offices and VNOCs in London, Toronto, New York, Hong Kong and Shanghai. In addition, the ISO/IEC 27001 certification also gives BCS Global, its customers, shareholders and partners added confidence that BCS Global subscribes to the best information security practices in the industry.

BCS will now continue to improve their processes and procedures and ensure certification this year against the new version of the standard known as ISO27001:2013, as well as incorporating further alignment and accreditation to government standards such as PSN and GCloud.

Certificate Details

Certificate number: LRQ 4006642

Valid from: 8 February 2015

Expiration Date: 7 February 2018

Scope Statement: Information Security relating to the provision of managed video conferencing and collaboration services in accordance with version 1.n of the Statement of Applicability.

What is ISO/IEC 27001?

ISO/IEC 27001 requires that management:

- Systematically examine the organization's information security risks, taking account of the threats, vulnerabilities and impacts;
- Design and implement a coherent and comprehensive suite of information security controls and/or other forms of risk treatment (such as risk avoidance or risk transfer) to address those risks that are deemed unacceptable; and
- Adopt an overarching management process to ensure that the information security controls continue to meet the organization's information security needs on an ongoing basis
