easy click*

## One Touch

---

*Join video meetings on-time, every time!*

Pinnaca One Touch provides a simple and intuitive way to schedule and start video meetings. One Touch allows users to schedule video meetings in Outlook or Google Calendar without plug-ins and to join with just *'one-click'* from video systems, desktop or mobile devices.

The broad vendor support makes it ideal for organizations with mixed environments, internal and external communications, as well as homogeneous organizations that are communicating externally using unknown video solutions.

### KEY FEATURES

**One Click** – Start all meetings with one-click via Cisco, One Button to Push (OBTP) and Polycom, Click-to-Join (CTJ) or set up dial out to any end-point. Mobile and browsers simply click a link to join.

**Forward** – Incoming invitations from Skype4B, WebEx, Spark, Videxio, Hangouts, StarLeaf, Zoom and other VMR providers can be forwarded to meeting rooms and get OBTP / CTJ. Optimize your video investment.

**Dynamic VMR Creation** – Book a room or simply add a pre-defined keyword (e.g. '@video') in the subject to create a unique VMR. It is extremely easy for anyone to create and join video meetings.

**End of Conference Warnings** – Customizable end of conference warnings are an advantage for room and time management.

**Skype IVR Option** – Enables external video systems to Skype Online (S4B O365) meetings.

**Auto Dial-Out** – Configure dial-out to rooms that do not support OBTP / CTJ or to rooms that prefer to be auto-connected.

**Integrated Recording** – Simply add a "recording" alias to the invitation to play or stream meetings. Supported vendors include Quickchannel, Panopto and Rec.VC.

**Custom Invitation** – Design user-friendly invitations that reflect your company's branding.

*Pinnaca One Touch + Pinnaca Control = Successful meetings from A to Z  
Control all video meetings – both scheduled and ad-hoc – in one application.  
Used together, it forms a powerful tool for seamless meetings.*
